

Student A

$374 \div 12 = 31 R 2$   
 $12 \times \underline{25} = 300$   
 $12 \times \underline{6} = 72$   
 $12 \times 31 = 372$   
 $372 \div 12 = 31 R 2$

add together  
 The problem is 374 so the remainder is 2.

If there 374 cookies and 12 kids. How many cookies do each kid get?  
 31 and  $\frac{2}{12} = \frac{1}{6}$

While 31R2 is a correct answer to this problem, 374 divided by 12 does not equal 31R2.
