

Student B

$374 \div 12 =$
I started with 12×10
which equals 120 then
I triple 120 which is
360. $360 = 30 \times 12$.
I then have 14 left.
There is one 12 in
14 with 2 left over.
Then I add $30 + 1r2$
and I get $31r2$
which is my answer.
