## *In Between* Directions

### You need

- o Fraction Cards—0, 1, and diamond ( $\blacklozenge$ ) cards only (1 deck per pair)

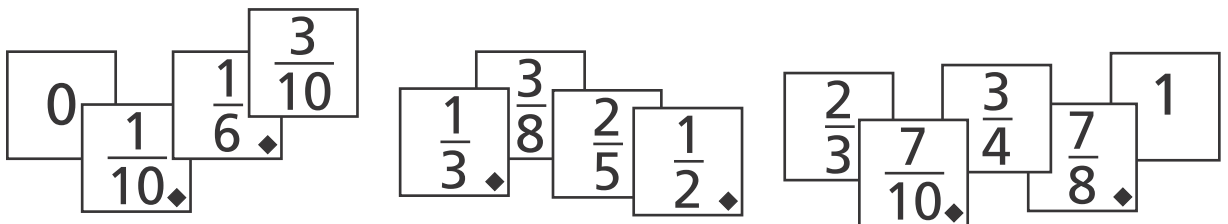

### Play with a partner.

- 1 Use the 0,  $\frac{1}{2}$ , and 1 cards from the fraction deck. Place them spread out on a table or desks. (See picture below.)
- 2 Mix the Fraction Cards with diamonds on them. Deal six cards face up to each player.
- 3 Players take turns placing a card so that it touches another card. You may place a card to the right of 0, on either side of  $\frac{1}{2}$ , or to the left of 1. As you play a card, state the fraction and how you know it is less than or greater than the card it is touching.
- 4 Cards must be placed in increasing order, from left to right.

A card may not be placed between two cards that are touching. In this example, the  $\frac{1}{8}$  card may not be placed between the 0 and  $\frac{1}{6}$  cards. So, you cannot place it in this round.

- 5 Your goal is to place as many cards as you can. The round is over when neither player can place any more cards. Your score is the number of cards left in your hand. At the end of the round, the table may look like this:

Player 1 could not place  $\frac{1}{8}$  and  $\frac{4}{5}$  and so has a score of 2.  
 Player 2 used all six cards and so has a score of 0.

- 6 At the end of five rounds, the player with the lower score wins.
