## Model for Looking at Student Work

## Describe Interpret Evaluate Think about next steps

Describe How did the student solve the problem?

What did s/he do first? Second?

Interpret What do you think the student understands?

What evidence is there of this understanding?

What do you think the student does not understand or is still working on? What evidence is there of this

misunderstanding?

Evaluate Does the student meet the benchmark? Partially meet

the benchmark? Does not meet the benchmark? Why?

Think about What might be some next steps for this student to

help him/her move towards computational fluency?

How do these next steps connect to the student's

understandings and misunderstandings?

next steps
